

# Sewer Cleaning Hose Coupling, press-type reusable type and mendrers

## Applications

Sewer cleaning hoses require a high level of safety regarding couplings.

There are two types:

- One piece press coupling = standard
- Reusable repair coupling = spare part coupling for field repair where press equipment is not available.

Press couplings are preferable because they are safe and less disposed to getting stuck in the sewer line.

## Technical description

**Material:** Free cutting steel, steel plated finish.

WP = 250 bar, for press-type  
WP = 200 bar, for reusable type

## Complementary information

This kind of press-type coupling for Canalkler hose requires following of swaging procedures issued by Trelleborg.
